

How the module is organised

Accounting has four tabs:

1. **Overview** — status of last week and what to do next
2. **Setup** — company rules and rate cards (this is where your settings live)
3. **Weekly close** — review pay, charge, margin and exceptions, then freeze the week
4. **Exports** — download CSVs (journal, charge pack by site, timesheet, and summaries)

Typical flow: configure once in Setup → review and close each week → download files for your systems.

1. Finding Accounting

In the left menu, open **Accounting**.

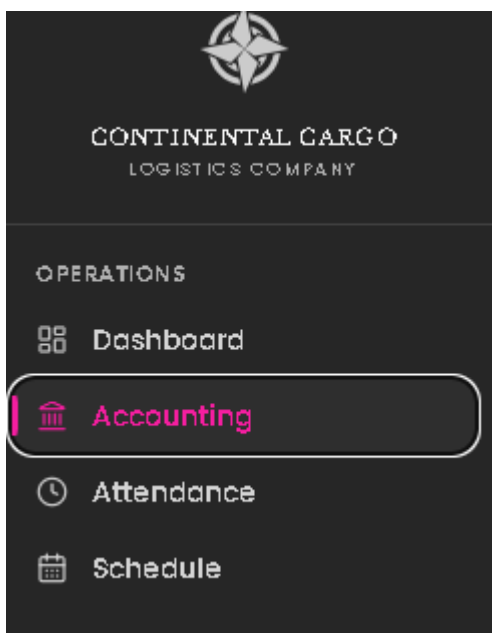

Ilustración 1 Sidebar with Accounting selected

2. Overview

This is the landing screen. It shows whether last week is still **Open** or already **Closed**, plus totals for **Pay** (staff cost), **Charge** (amount billed to sites/customers), and **Margin**.

It also flags:

- exceptions that need a look (incomplete clock-outs, overtime, missing rates, and so on)
- configuration gaps (for example, no company rate matrix yet)

- the next recommended step (close the week, or go to Exports if it is already frozen)

Accounting
Configure pay and charge rules, review the week, then export files for your systems.

Overview (Status and next steps) | **Setup** (Rules and rate cards) | **Weekly close** (Review and freeze) | **Exports** (Download files)

Week status
Open
Ready for review

Pay
\$0.00
Total staff cost

Charge
\$0.00
Total billed to clients

Margin
\$0.00
Charge minus pay

What needs attention

- Week is still open — close when ready

[Go to Weekly close](#)

Configuration health

- 2 staff using company defaults (no personal card)
- 3 sites without a charge card

[Go to Setup](#)

Next step

- Review totals, then close the week

[Go to Weekly close](#)

How this module works

- Setup** — configure pay rules, time bands, and rate cards for staff and sites.
- Weekly close** — review pay, charge, margin and exceptions. Close the week to freeze numbers.
- Exports** — download journal entries, charge packs by site, and detailed timesheets.

Ilustración 2 Overview with the four status cards and the “needs attention” / “configuration health” panels

3. Setup — company rules

This is the heart of what you asked for. Rules apply company-wide unless a staff member or a site has its own override.

Time bands

Named parts of the day used as columns on the rate cards (for example Early morning 00:00–06:00, Afternoon 18:00–24:00). Overnight bands can wrap (22:00–06:00).

Minimums and leave

Minimum billable/payable hours (your 4-hour rule). If someone is rostered for 2 hours, the system can still pay and/or charge the minimum. Pay and charge minima are separate, and either can be turned off with 0. You can also choose whether approved leave is paid in the award.

Minimums and leave

Minimums hours ensure staff are paid/charged for at least a set amount per session or day. Leave settings control whether approved leave generates award lines.

4. Setup — rate cards

This is the table of rates you described.

- **Pay** = what we pay staff
- **Charge** = what we bill the customer (in the system, each **site / warehouse** is the customer)

There are three layers:

1. **Company defaults** — used when a person or site has no card of their own
2. **Staff cards** — personal pay rates
3. **Site cards** — charge-out rates for that warehouse

Each cell can be a dollar rate or a percentage of the base. An empty cell inherits the company/base rate.

The matrix columns are your day types (Mon–Fri, Saturday, Sunday, Public holiday). The rows are your time bands (base / early morning / afternoon, etc.).

Staff Sites **Company defaults**

Default pay matrix
Starting loadings (% of each person's hourly rate). Used when staff have no card for that day and band. Change the numbers to match your award.
Applies to all staff who do not have their own pay card override.
Empty inherits company/base rate.

Band	Monday to Friday	Saturday	Sunday	Public holiday
Base	% 100	% 150	% 200	% 250
Early morning	% 125	% 175	% 225	% 250
Afternoon	% 125	% 175	% 225	% 250
Overtime	% 150	% 200	% 250	% 250

Default charge matrix
Starting charge loadings (% of the staff hourly rate), a bit above pay so margin is visible. Override per site when a customer has different rates.
Applies to all sites that do not have their own charge card override.
Empty inherits company/base rate.

Band	Monday to Friday	Saturday	Sunday	Public holiday
Base	% 150	% 150	% 200	% 250
Early morning	% 125	% 175	% 225	% 250
Afternoon	% 125	% 175	% 225	% 250
Overtime	% 150	% 200	% 250	% 250

Save company defaults

SITE TIME BANDS

Leave empty to inherit company bands. Overnight bands can wrap (e.g. 22:00–06:00).

Add site band

Empty inherits the company charge matrix, then the staff weekday base.

Band	Monday to Friday	Saturday	Sunday	Public holiday
Base	\$ Default	\$ Default	\$ Default	\$ Default
Early morning	\$ Default	\$ Default	\$ Default	\$ Default
Afternoon	\$ Default	\$ Default	\$ Default	\$ Default
Overtime	\$ Default	\$ Default	\$ Default	\$ Default

Save site billing

Staff with no personal card use the company pay defaults (plus their base hourly rate where applicable). Sites with no card use the company charge defaults.

Choose the period (last week is the default). You will see pay, charge and margin, grouped by **site** or **staff**.

Exceptions are listed so incomplete sessions, overtime, fallback rates and missing site cards are visible before you freeze anything.

You can open a session for the hour-by-hour split (which band and day type were applied).

When the week looks correct, **Close week** freezes the figures so later clocking changes do not rewrite that period. The week can be unlocked if needed.

The screenshot shows the 'Accounting' interface with the 'Weekly close' tab selected. It displays summary statistics for the week of 17 August 2026 to 23 August 2026. The totals are: Total pay \$160.00, Total charge \$300.00, and Margin \$140.00. There are 3 exceptions listed for review. A breakdown table shows data for site JAS with 4.00 hours, resulting in a pay of \$160.00, a charge of \$300.00, and a margin of \$140.00. The interface includes navigation tabs for Overview, Setup, Weekly close, and Exports, and buttons for 'Close week', 'Export charge pack', 'Export journal', and 'Download summary CSV'.

Site	Hours	Pay	Charge	Margin
JAS	4.00	\$160.00	\$300.00	\$140.00

Ilustración 13 Weekly close totals and grouping - Exceptions list - Session detail showing time-band split — optional but useful

6. Exports

After close (or for any selected period), you can download CSVs:

- **Pay** — what to pay staff
- **Charge** — what to bill, by site
- **Margin** — charge minus pay
- **Timesheet** — session-level detail
- **Journal** — GL lines (expense debit / payable credit by employment type)
- **Charge pack** — pack per site for customer billing

You can group by staff, site, day, time band or employment type before downloading.

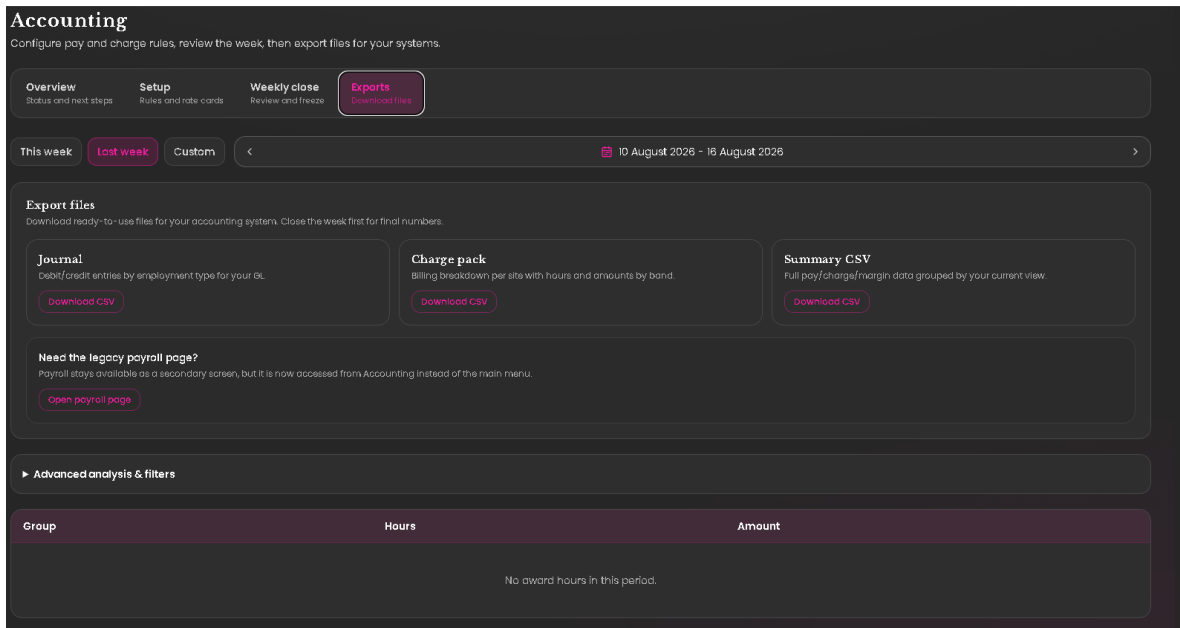

Ilustración 14 Exports screen with view tabs and Download CSV

A note on how hours are calculated

Figures come from **actual clock-ins and clock-outs**, not from the roster alone. Time is split across your bands and day types, then overtime and minimum hours are applied. Incomplete sessions (no check-out) are flagged and do not go into pay until they are resolved.

Please have a look at the screenshots and let me know:

- whether the time bands and day types match how you price work
- whether 4-hour minima on pay and charge are correct as a company default
- whether overtime should be daily, weekly, or both
- any GL codes or employment types you want set before go-live
- the CSV layouts you need for your accounting software, if they differ from these

I will set up your user as soon as we are ready, so you can work in the module directly.

Kind regards,
Daniel
